| | |
|--------------|--|
| Manufacturer | Guangzhou Sanjing Electric Co., Ltd. |
| Address | No.9, Lizhishan Road, Science City, Guangzhou High-tech Zone, Guangdong, P.R.China |

| | | | | |
|-----------------------------|--|--------------|--------------|--------------|
| Product Name | AC Retrofit Battery System | | | |
| Product Type | AS1-3KS-5.1 | AS1-3KS-10.2 | AS1-3KS-15.3 | AS1-3KS-20.4 |
| Max. AC Current [A] | 13.1 | 13.1 | 13.1 | 13.1 |
| Maximum Apparent Power [VA] | 3000 | 3000 | 3000 | 3000 |
| Generating Unit technology | Single phase isolated type multifunctions type BI-directional energy storage system. | | | |
| Type Tested | Base on requirements EN 50549-1:2019 | | | |
| Test Location | Guangzhou Sanjing Electric Co., Ltd. No.9, Lizhishan Road, Science City, Guangzhou High-tech Zone, Guangdong, P.R.China | | | |
| Test Date | 2021-7-14 to 2021-7-16 | | | |
| Compliant to | -Requirements to Type A Generation Unit. -Commistion Regulation (EU) 2016/631 (NC RfG). | | | |

Date: 2021, 7, 19

Signature:

Type Test Verification Report

Models AS1-3KS-5.1, AS1-3KS-10.2, AS1-3KS-15.3 and AS1-3KS-20.4 have the same structure, software logic and hardware structure, Except for the different model names and the number of parallel batteries, all tests are performed in AS1- 3KS-20.4.

Power Quality – Harmonics: These tests should be carried out as specified in EN 61000-3-2. The chosen test should be undertaken with a fixed source of energy at two power levels:

a) between 45 and 55%, b) at 100% of Registered Capacity.

| Micro-generator rating per phase (rpp) | | 3 | kW | | | |
|--|----------------------------------|----|-----------------------------|----|----------------------------------|---|

| Test Impedance | R | 0.4 | Ω | X | 0.25 | Ω |
| Standard Impedance | R | 0.24 * 0.4 ^ | Ω | X | 0.15 * 0.25 ^ | Ω |
| Maximum Impedance | R | -- | Ω | X | -- | Ω |

Applies to three phase and split single phase **Micro-generators**.

^ Applies to single phase **Micro-generators** and **Micro-generators** using two phases on a three phase system.

For voltage change and flicker measurements the following formula is to be used to convert the measured values to the normalised values where the power factor of the generation output is 0.98 or above.

Normalised value = Measured value*reference source resistance/measured source resistance at test point.

Single phase units reference source resistance is 0.4 Ω

Two phase units in a three phase system reference source resistance is 0.4 Ω.

Two phase units in a split phase system reference source resistance is 0.24 Ω.

Three phase units reference source resistance is 0.24 Ω.

Where the power factor of the output is under 0.98 then the X to R ratio of the test impedance should be close to that of the Standard Impedance.

The stopping test should be a trip from full load operation.

The duration of these tests need to conform to the particular requirements set out in the testing notes for the technology under test. Dates and location of the test need to be noted below.

| Power quality – DC injection: | | | | |
|--|--|----------|----------|-------|
