

Welcome to the Team

New Products Announced
February 2021

In the Pack

- Price List 2021.01
- Clearline fusion G1 Datasheets (EN, DE, NL)
- Webshop product images

Embargoed until Wednesday 17th February

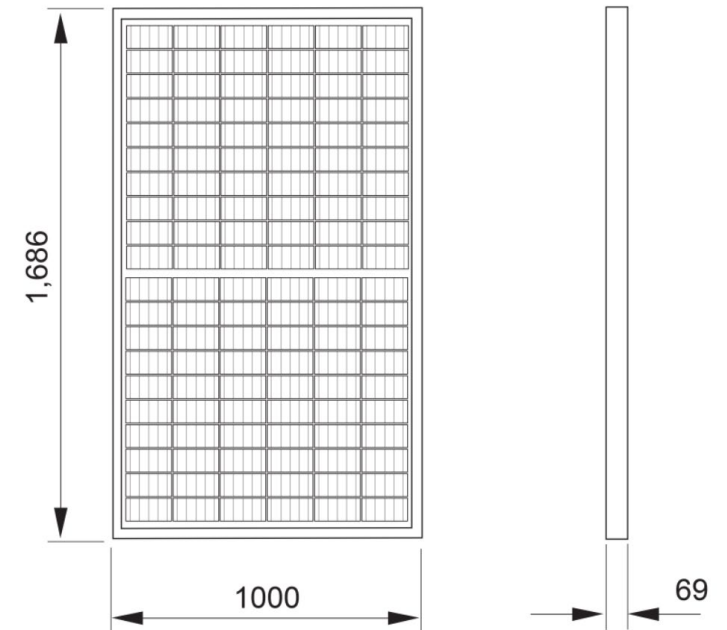

Half-cut Cells

Use of two parallel circuits in the module halves the current in the cells and gives technical benefits:

- Reduced resistance losses at cell connections for higher panel efficiency
- Each half is unaffected by shading on the other
- Lower heating effect from spot shading
- Greater resistance to mechanical stress in bending

G1 Cell Size

- Most widely available among new cell formats
- 335Wp and 340Wp = 3 panels / kWp
- Increase total power from a roof area or...
....less panels needed to achieve target system size
- Positions Clearline fusion for higher power modules as cell technology develops

G1 Flashings

- New panel dimensions requires different roofing kits
- Box labels have black background to reduce risk of mix-ups
- Opportunity to respond to customer feedback for a darker colour flashings to better blend with the panels

Availability

1. Modules & Portrait Kits
2. Landscape Kits & Portrait Corners
3. Landscape Corners
4. Velux Integration Kits
